

IN THE CLAIMS:

1-10. (canceled)

11. (currently amended) A multi-focal contact lens wherein the lens is manufactured at least partially from a responsive polymer gel and wherein said responsive polymer gel is not a dual shape memory polymer.

12. (original) A multi-focal contact lens according to Claim 11 wherein the responsive polymer gel changes shape and/or refractive index.

13. (original) A multi-focal contact lens according to Claim 11 wherein the responsive polymer gel responds to the application of stimulus.

14. (original) A multi-focal contact lens according to Claim 13 wherein the stimulus is an electric field.

15. (original) A multi-focal contact lens according to Claim 13 wherein the stimulus is a magnetic field.

16. (original) A multi-focal contact lens according to Claim 13 wherein the stimulus is produced by means embedded in the contact lens itself.

17. (original) A multi-focal contact lens according to Claim 16 wherein the means of providing the stimulus is a nano or micro chip.

18. (original) A multi-focal contact lens according to Claim 17 wherein the chip monitors the eye movement such that a change in eye movement causes the chip to emit the stimulus.

19. (original) A multi-focal contact lens according to Claim 17 wherein the chip monitors inter-pupillary distance and emits a stimulus when this changes.

20. (original) A multi-focal contact lens according to Claim 17 where the chip monitors the distance between the right and left contact lenses and emits a stimulus when this changes.
